

Sample PDF for PyPDFLoader

This document is intended for learning LangChain's PyPDFLoader.

Section 1: Artificial Intelligence

Artificial Intelligence (AI) enables machines to perform tasks that typically require human intelligence, such as reasoning, learning, and decision-making.

Section 2: LangChain

LangChain is a framework for building applications with large language models. It provides document loaders, text splitters, embeddings, vector stores, retrievers, and chains.

Section 3: Retrieval-Augmented Generation (RAG)

A typical RAG pipeline consists of: Load document -> Split text -> Create embeddings -> Store in vector database -> Retrieve relevant chunks -> Generate answer.

Keywords: AI, Machine Learning, Deep Learning, NLP, LangChain, PyPDFLoader, Vector Database, Chroma, FAISS, Embeddings, Retrieval, RAG.
