

Artificial Intelligence

AI is the simulation of human intelligence by machines. It includes learning, reasoning, perception, and language understanding. Modern AI powers assistants, recommendation systems, and automation.

Artificial Intelligence

Machine Learning is a subset of AI where systems learn patterns from data instead of explicit programming. Supervised, unsupervised, and reinforcement learning are common approaches.

Artificial Intelligence

Generative AI creates new content such as text, images, audio, and code. Large language models are trained on vast datasets and can assist with writing, coding, and research.

Artificial Intelligence

Ethics in AI involves fairness, transparency, privacy, and accountability. Responsible development aims to reduce bias and ensure safe deployment.
